

**Name:** Sayali Ashok Lagad

**Website Indexed:** Fox News

### Step 1: Installation of VirtualBox and Ubuntu on Windows Machine

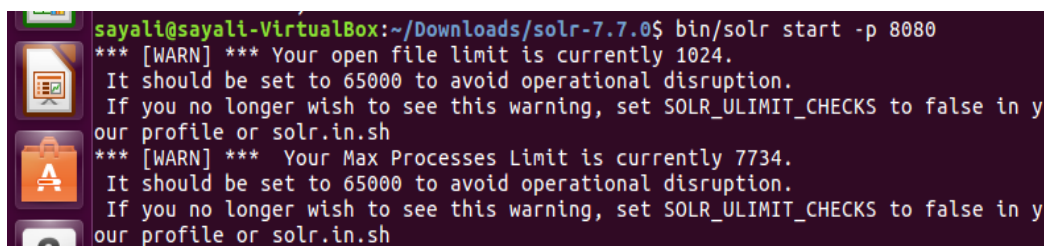

- Downloaded VirtualBox and Ubuntu from the links provided.
- Created a Virtual Machine in VirtualBox:
  - New** -> Name: CSCI572-Linux, Type: Linux, Version: Ubuntu (64-bit); **Next** -> Memory size: 2048 MB; **Next** -> Create a virtual hard disk now; **Create** -> VDI (Virtual Disk Image); **Next** -> Dynamically allocated; **Next** -> File size: 128GB; **Create**.
- Started the virtual machine created above by clicking the **Start** button.
- Selected ubuntu downloaded in Step 1 as the start-up disk->**Start**.
- Clicked on **Install Ubuntu**.
- Provided details like: Name, Computer's name, Username, Password->**Continue**.
- Added guest devices to the machine by following the instructions provided in the pdf.

### Step 2: Installation of Java in Virtual Machine

- Installed Java by following the procedure mentioned in the pdf.

### Step 3: Installation of Solr and Indexing HTML Files

- Downloaded Solr 7.7.0. Unzipped and opened the terminal from the unzipped folder.
- Created a collection on one port and uploaded the provided HTML files for FOX NEWS by following commands as below:
  - **\$ bin/solr start -p 8080** (started Solr on port 8080)

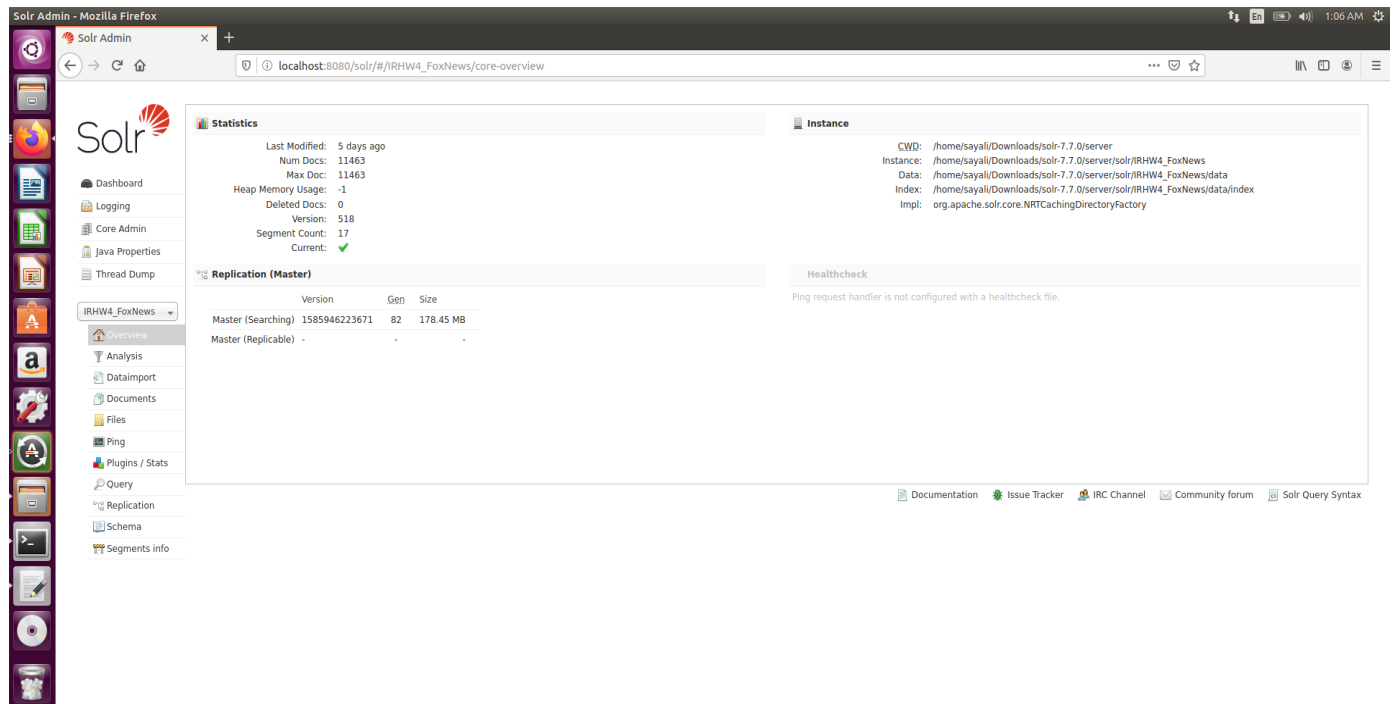

A terminal window with a dark background and light-colored text. The prompt is 'sayali@sayali-VirtualBox:~/Downloads/solr-7.7.0\$'. The command entered is 'bin/solr start -p 8080'. The output shows two warning messages: one about the open file limit (1024 vs 65000) and another about the max processes limit (7734 vs 65000). Both warnings suggest setting 'SOLR\_ULIMIT\_CHECKS' to false in the profile or solr.in.sh file.

```
sayali@sayali-VirtualBox:~/Downloads/solr-7.7.0$ bin/solr start -p 8080
*** [WARN] *** Your open file limit is currently 1024.
It should be set to 65000 to avoid operational disruption.
If you no longer wish to see this warning, set SOLR_ULIMIT_CHECKS to false in y
our profile or solr.in.sh
*** [WARN] *** Your Max Processes Limit is currently 7734.
It should be set to 65000 to avoid operational disruption.
If you no longer wish to see this warning, set SOLR_ULIMIT_CHECKS to false in y
our profile or solr.in.sh
```

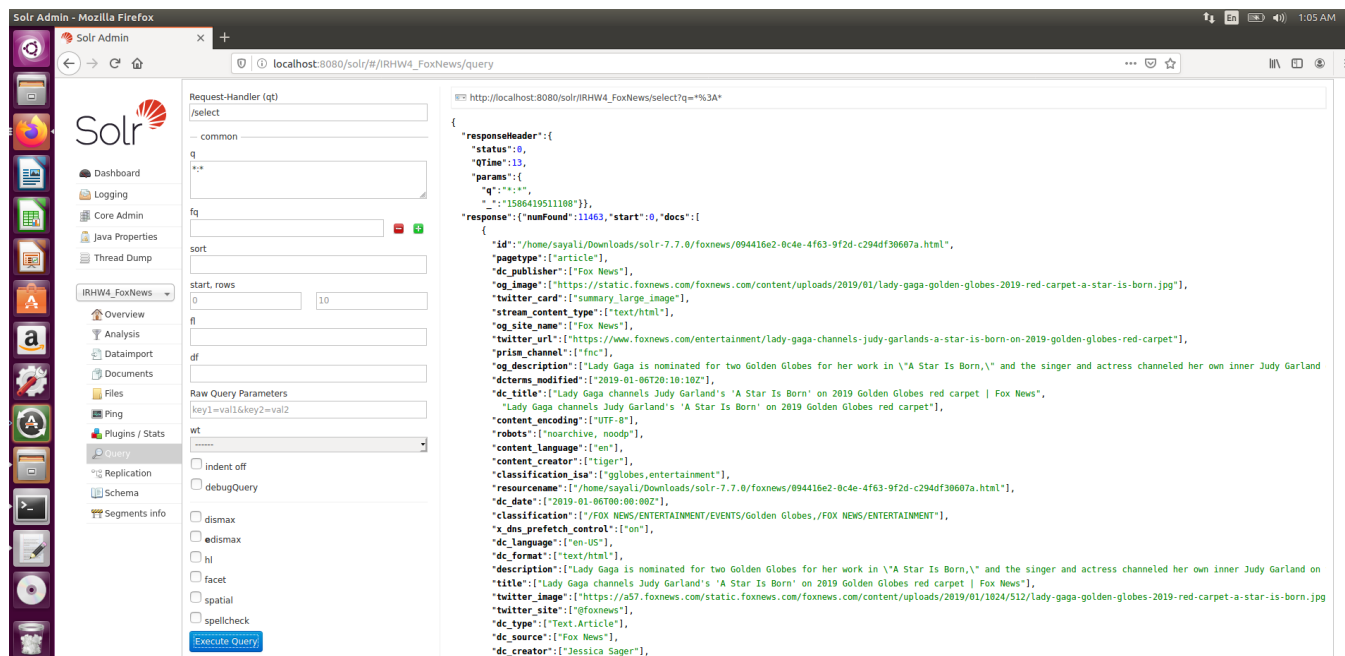

- **\$ bin/solr create -c IRHW4\_FoxNews -p 8080** (created collection named IRHW4\_FoxNews on port 8080)
- Opened the file **managed-schema.xml** located within conf folder of the collection and uncommented the line **<copyField source="\*" dest="\_text\_"/>** to combine all information from different fields into a single field. Saved the changes. Copied the folder containing downloaded HTML files inside the folder of Solr and switched back to terminal.
- **\$ bin/post -c IRHW4\_FoxNews -filetypes html foxnews/ -p 8080** (indexed the files using post tool of Solr)

```
^Csayali@sayali-VirtualBox:~/Downloads/solr-7.7.0$ bin/post -c IRHW4_FOXNEWS -filetypes html foxnews/ -p 8080
java -classpath /home/sayali/Downloads/solr-7.7.0/dist/solr-core-7.7.0.jar -Dauto=yes -Dfiletypes=html -Dport=8080 -Dc=IRHW4_FOXNEWS -Ddata=files -Drecursive=yes org.apache.solr.util.SimplePost
s/
SimplePostTool version 5.0.0
Posting files to [base] url http://localhost:8080/solr/IRHW4_FOXNEWS/update...
Entering auto mode. File endings considered are html
Entering recursive mode, max depth=999, delay=0s
Indexing directory foxnews (11464 files, depth=0)
```

- Verified if the Solr UI works well on port 8080.

- Ran a basic query to verify if the indexing is done correctly.

#### Step 4: Extracting URLs from HTML Files

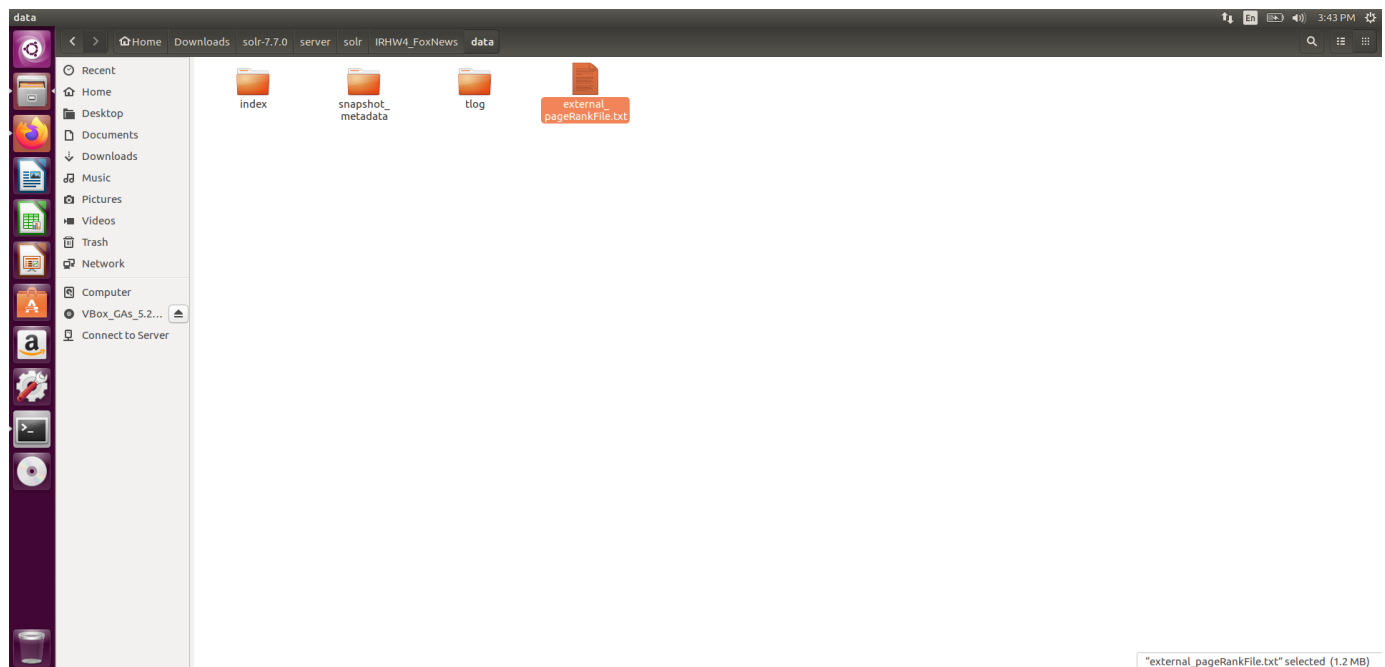

- Downloaded **jsoup-1.11.3.jar** and **opencsv-5.1.jar** required to parse HTML pages and read CSV file respectively.
- Wrote Java code to extract outgoing URLs from each downloaded HTML file and create an edge between the current page and the outgoing page.
- Created an **edgeList.txt** file that represents an edge between an HTML page and its outgoing HTML page.

#### Step 5: Calculating Page Rank

- Installed pip using the command **python get-pip.py**
- Installed network library using command **pip install networkx==2.2**
- Wrote a python code to form a graph with the provided edges and calculate page rank using the graph and the following attributes: **alpha=0.85, personalization=None, max\_iter=30, tol=1e-06, nstart=None, weight='weight', dangling=None**
- Created **external\_pageRankFile.txt** file which represents page rank for each HTML file using the above code.

#### Step 6: Configuration settings in xml files of Solr

- Placed the above **external\_pageRankFile.txt** inside data folder of the created core.

- Modified the **managed-schema.xml** file to add a field names **pageRankFile** which refers to the page rank score for each HTML file. Added the following lines to the file:  
**<fieldType name="external" keyField="id" defVal="0" class="solr.ExternalFileField"/>**  
**<field name="pageRankFile" type="external" stored="false" indexed="false"/>**
- Modified **solrconfig.xml** file to define event listeners to load the external file in the searcher thus enabling us to use an external Page ranking algorithm within Solr. The following lines were added:

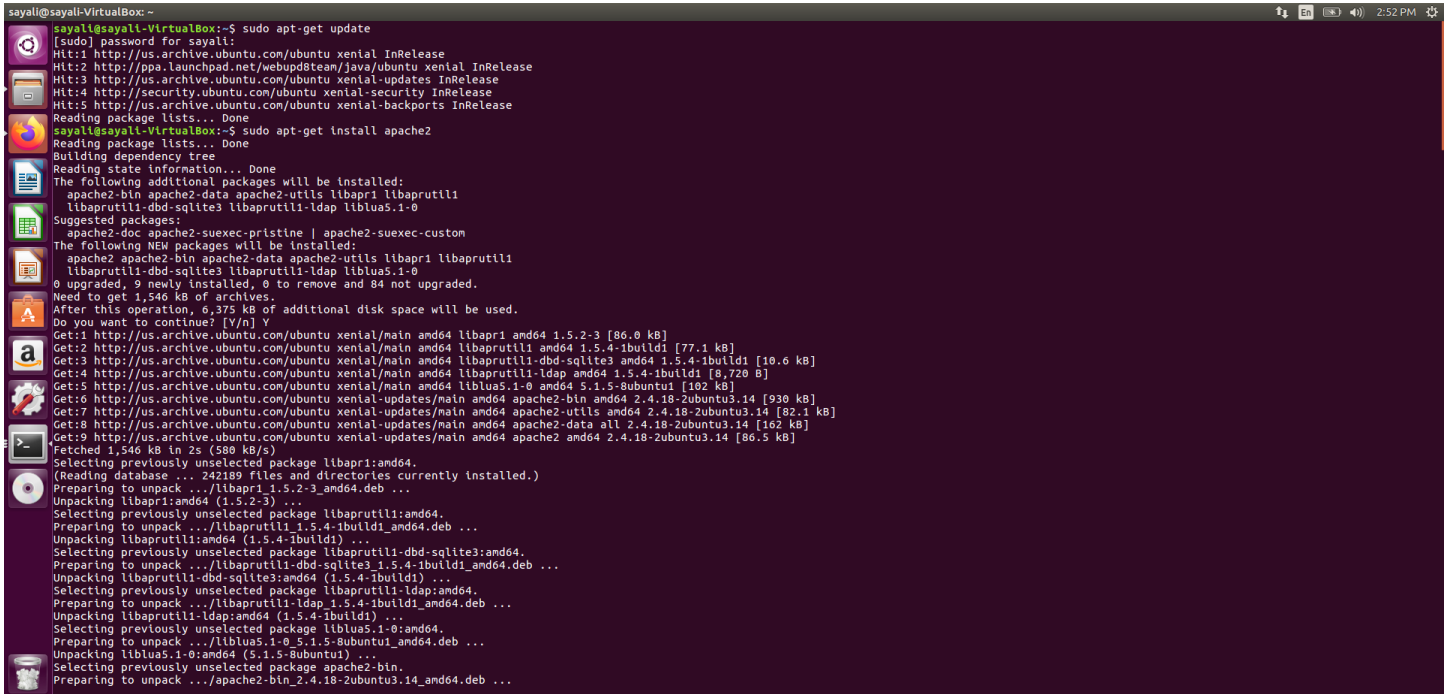

```
<listener event="newSearcher" class="org.apache.solr.schema.ExternalFileFieldReloader"/>
<listener event="firstSearcher" class="org.apache.solr.schema.ExternalFileFieldReloader"/>
```

- Reloaded the index through the Solr UI.

## Step 7: Installation of Apache and PHP

- Executed the following command in terminal:

- `$ sudo apt-get update`
- `$ sudo apt-get apache2`

```
sayali@sayali-VirtualBox: ~
sayali@sayali-VirtualBox:~$ sudo apt-get update

- \$ sudo systemctl restart apache2

## Step 8: Query Box using PHP

- Cloned the git repository <https://github.com/PTCInc/solr-php-client.git> in the path: **var/www/html/**
- Placed the provided URL mapping csv file in the same path.
- Created a .php file using the sample code and made necessary changes such as changing the port number of Solr, adding radio buttons for page rank selection, limiting the fields to be displayed, and the search strategy to be used.
- Also modified **Service.php** file present in Apache/solr folder of the cloned git repo in order to reflect correct port number and path on which Solr is running.

```
Service.php (/var/www/html/solr-php-client/Apache/Solr) - gedit

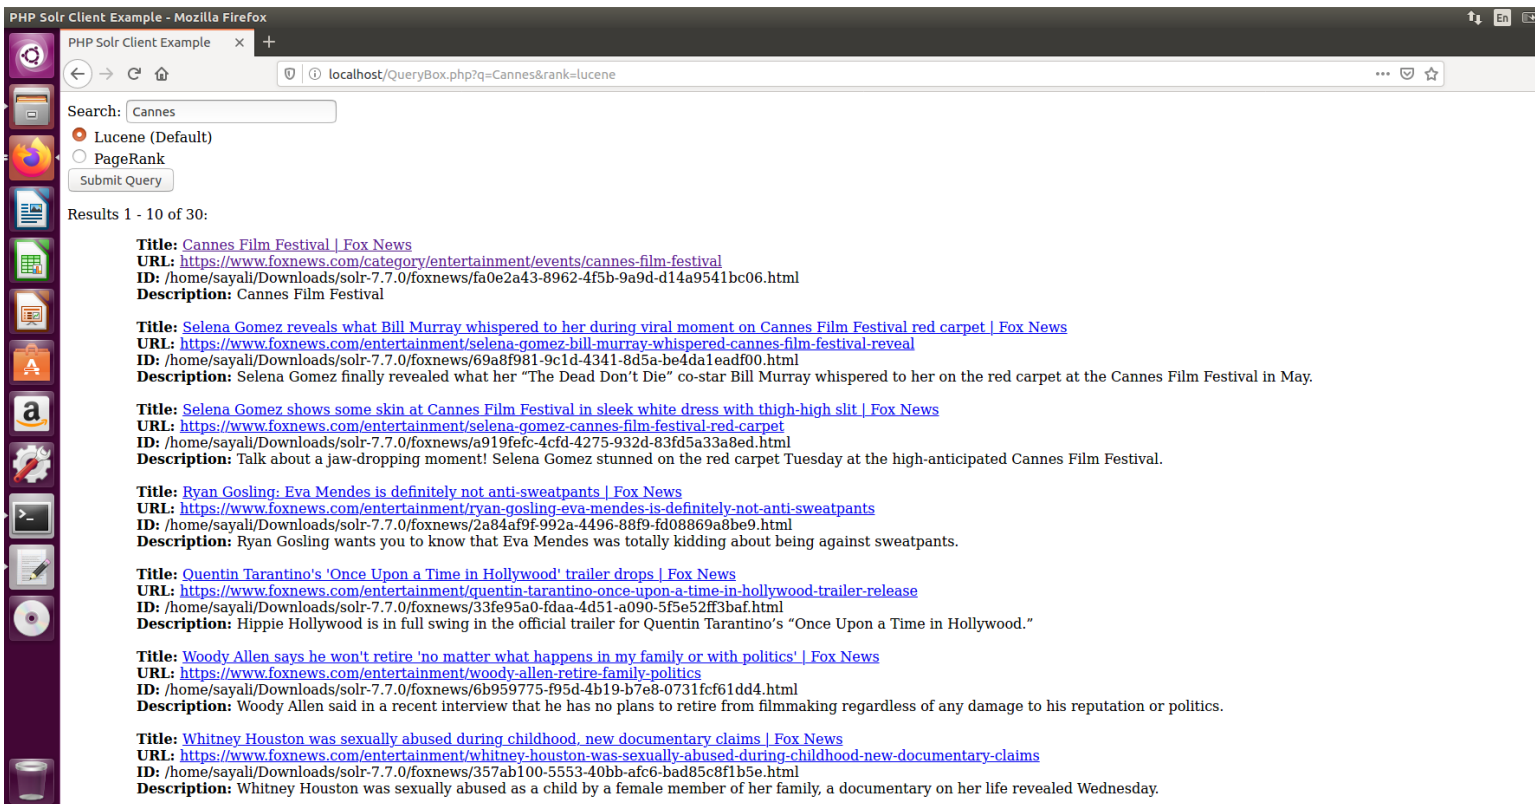

/**
 * Constructor. All parameters are optional and will take on default values
 * if not specified.
 *
 * @param string $host
 * @param string $port
 * @param string $path
 * @param Apache_Solr_HttpTransport_Interface $httpTransport
 * @param string $protocol
 */
public function __construct($host = 'localhost', $port = 8080, $path = '/solr/IRHM4_FoxNews/query', $httpTransport = false, $protocol = 'http')
{
    $this->setHost($host);
    $this->setPort($port);
    $this->setPath($path);
    $this->setProtocol($protocol);
}
```

- Below are the screenshots of the UI:

## Initial Query Page:

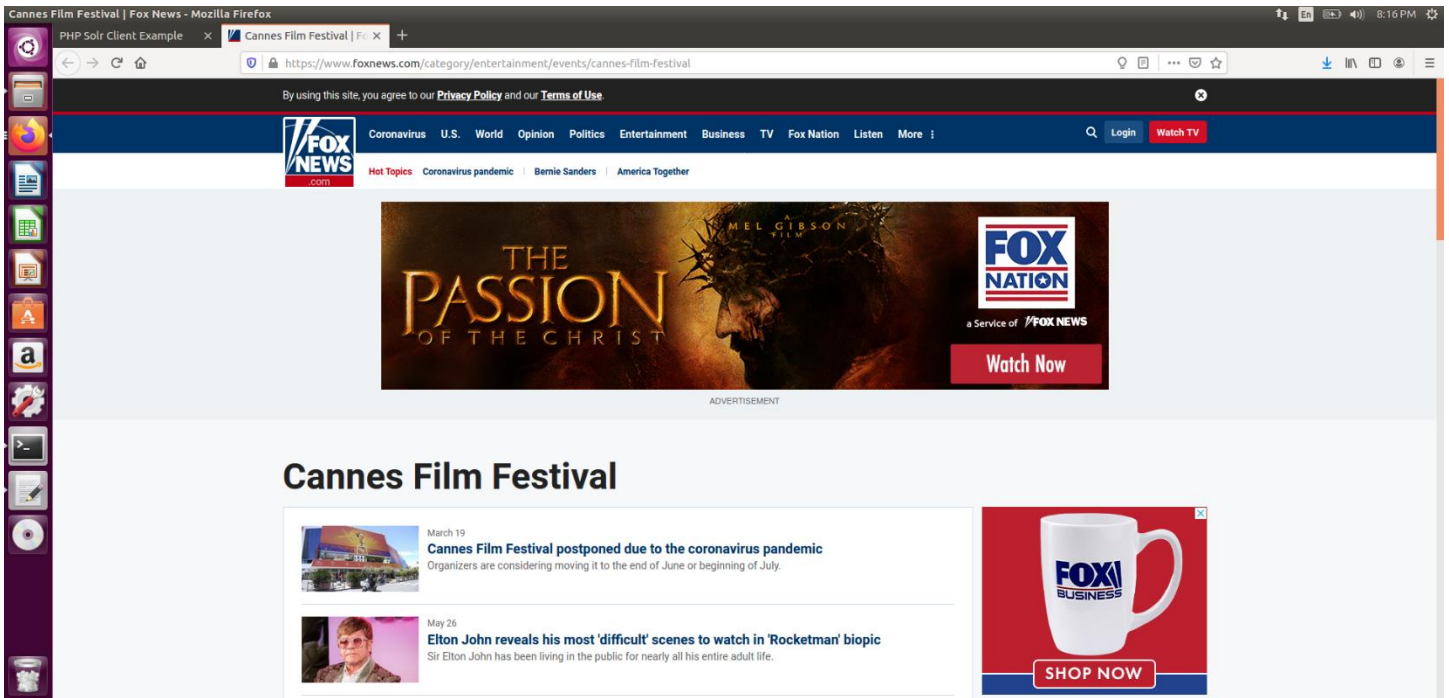

## Query Page for the query 'Cannes' and 'Lucene' (Solr default) algorithm:

## Actual Clickable Link:

The screenshot shows the Fox News website in a Mozilla Firefox browser. The address bar displays the URL: <https://www.foxnews.com/category/entertainment/events/cannes-film-festival>. The page header includes the Fox News logo and navigation links for Coronavirus, U.S., World, Opinion, Politics, Entertainment, Business, TV, Fox Nation, Listen, and More. A search bar and 'Login' and 'Watch TV' buttons are also present. The main content area features a large banner for 'THE PASSION OF THE CHRIST' with a 'Watch Now' button. Below this, the section 'Cannes Film Festival' is displayed, containing two articles: 'Cannes Film Festival postponed due to the coronavirus pandemic' (dated March 19) and 'Elton John reveals his most 'difficult' scenes to watch in 'Rocketman' biopic' (dated May 26). A 'FOX BUSINESS' mug advertisement is visible on the right side of the page.

## Query Page for 'Cannes' query and 'PageRank' ranking algorithm:

The screenshot shows the PHP Solr Client Example website in a Mozilla Firefox browser. The address bar displays the URL: <localhost/QueryBox.php?q=Cannes&rank=pagerank>. The search bar contains the query 'Cannes'. The results are displayed as a list of search results, each with a title, URL, ID, and description. The results are ranked by PageRank. The first result is 'Roman Polanski accused of 'extremely violent' rape of French woman in 1975 when she was 18: report | Fox News'. The second result is 'Ryan Gosling: Eva Mendes is definitely not anti-sweatpants | Fox News'. The third result is 'Julie Andrews says therapy 'saved' her life after her first marriage ended | Fox News'. The fourth result is 'Whitney Houston was sexually abused during childhood, new documentary claims | Fox News'. The fifth result is 'Selena Gomez poses with mom, sister in rare family photo: 'Couldn't love this more' | Fox News'. The sixth result is 'Sharon Stone Rocks Bikini. See Her Many Ageless Looks | Fox News'. The results are displayed in a list format with a 'Search:' label and a 'Submit Query' button.

## Solr Query Results for the query 'Cannes' and default Lucene algorithm:

## Solr Query Results for the query 'Cannes' and external Page Rank algorithm:

The screenshot shows the Solr Admin interface in a Mozilla Firefox browser. The URL bar displays `localhost:8080/solr/#/IRHW4_FoxNews/query`. The left sidebar contains navigation links: Dashboard, Logging, Core Admin, Java Properties, Thread Dump, and a message 'No cores available Go and create one'. The main panel is divided into two sections. The left section, titled 'Request-Handler (qt)', contains fields for 'q' (set to 'Cannes'), 'fq' (empty), 'sort' (set to 'pageRankFile desc'), 'start, rows' (set to '0' and '10'), 'fl' (set to 'og\_url'), 'df' (empty), 'Raw Query Parameters' (set to 'key1=val1&key2=val2'), and 'wt' (set to 'json'). There are checkboxes for 'indent off', 'debugQuery', 'dismax', 'edismax', 'hl', 'facet', 'spatial', and 'spellcheck'. An 'Execute Query' button is at the bottom. The right section displays the JSON response from the query. The response includes a 'responseHeader' with status 0, QTime 109, and parameters for the query. The 'response' section shows 'numFound': 30, 'start': 0, and a list of documents, each containing an 'og\_url' field with a link to a Fox News article.

  }
}
```

### Reason for some pages having higher page rank than others:

The java program was written to find out the number of outgoing pages from a page and using the Python code, a directed graph was formed where each node represents an HTML page and edges represent an outgoing link from one node to another. The page-rank method of network library uses this graph and computes page rank for each page depending on the incoming links for each node. As each page has different # of incoming links, the page rank for each page comes out to be different. For nodes (pages) having larger # of incoming links, the calculated page rank is higher as compared to nodes (pages) having lesser # of incoming links.

Below are the query results for each query and both ranking algorithms:

#### 1. Cannes:

Sr. No.	Lucene (Default)	PageRank
1.	<a href="https://www.foxnews.com/category/entertainment/events/cannes-film-festival">https://www.foxnews.com/category/entertainment/events/cannes-film-festival</a>	<a href="https://www.foxnews.com/entertainment/french-woman-roman-polanski-rape-1975">https://www.foxnews.com/entertainment/french-woman-roman-polanski-rape-1975</a>

2.	<a href="https://www.foxnews.com/entertainment/selena-gomez-bill-murray-whispered-cannes-film-festival-reveal">https://www.foxnews.com/entertainment/selena-gomez-bill-murray-whispered-cannes-film-festival-reveal</a>	<a href="https://www.foxnews.com/entertainment/ryan-gosling-eva-mendes-is-definitely-not-anti-sweatpants">https://www.foxnews.com/entertainment/ryan-gosling-eva-mendes-is-definitely-not-anti-sweatpants</a>
